Almy 70600 and 70609 Level Brass Candelabra

Almy 70602 and 70606 Slanted Brass Candelabra

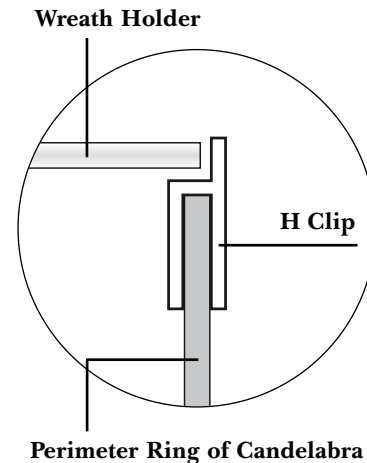

This Advent Wreath Holder is a clear plastic disc, with cutouts that allow it to fit over the center candle holder and inside the perimeter candle holders on a variety of Advent candelabra. It will rest on the internal cross bars of the candelabrum top and hold winter greenery. Simply remove the protective film from both sides of the holder and place on your candelabrum top.

In most cases, the holder will stay in place without requiring any additional hardware. On Almy's Slanted Candelabra 70602 and 70606, though, the wreath holder will slide off if not held in place. For this purpose we have included a packet of "H Clips" to be installed on the top edge of the perimeter ring of the candelabrum (see illustration). If you have one of Almy's Slanted Advent Candelabra, set a few of these clips in place before installing your wreath holder.
