

Filling the Almy Liquid Candle Lighter with KerryLiquid

This can be done while the Liquid Candle Lighter is either detached or attached to the Lighter-Snuffer.

- Unscrew the wick holder from the end of the Liquid Candle Lighter and uncover the liquid reservoir.
- Using a KerryLiquid KL210 bottle with a pour spout cap, carefully fill the reservoir. Be careful not to over fill.
- Replace wick holder and screw tight.
- *Store lighter “wick up” to prevent liquid from leaking.*

Thank you for purchasing the Almy Liquid Candle Lighter. It is designed to make use of your existing conventional candle lighter-snuffer and prevent the damage caused by traditional wax tapers.

Installing your Almy Liquid Candle Lighter on your Candle Lighter-Snuffer

- On Lighter-Snuffer, remove any remaining wax taper from the lighter section.
- On Almy Liquid Candle Lighter, loosen the thumbscrew enough to allow it to slide onto the taper-holder tube of the Lighter-Snuffer.
- Slide the Almy Liquid Candle Lighter onto the taper-holder tube of the Lighter-Snuffer, and tighten the thumbscrew until it is secure.
